

DRTrack 24.2 (June 2024)

Modified on: Mon, 1 Jul, 2024 at 6:53 PM

DRTrack 24.2 should now be available to all customers.

IN THIS RELEASE

- [New Features](#)
- [Enhancements](#)
- [Bug Fixes](#)

New Features

- You can now [export to Samsara](https://support.appianrouting.com/en/support/solutions/articles/19000115331-samsara-integration) without driver or driver pre-assignment in DRTrack.

Enhancements

- Improved some internal D2Link stored procedures to help with current performance
- Removed the EnableUnassignedRouteExports **INI** setting from Configuration.
- Enhanced Export to Samsara to only export stop userfields.
- Updated jQuery to align with internal security protocols.
- Added the ability to validate unique driverIDs with **TTC** when creating drivers in DRTrack. Drivers created this way can be used with Trimble Smart Workflow.

Bug Fixes

- Fixed an issue with the lightbox display of pictures related to jQuery changes.
- Fixed an issue where deleting the last driver from a branch produced an error.
- Fixed multiple importer issues related to logged messages found with internal CPIH (Samsara) importers.
- Fixed an issue with duplicate values existing for imports related to Samsara
- Fixed an issue where logging into Samsara would log you out of DRTrack.
- Fixed an issue where Excel spreadsheets (.xis and .xlsx) being imported by OIS were skipped if they contained a letter in the Order#.
- Fixed an issue where files being imported by OIS did not contain an estimated Ship Date. A new key has been added under app settings in the **DRTrackOrderImportService.exe.config** file.

- `<add key="AllowDispatchDateToAutoFillifEmpty" value="true"/>`

When set to **True**, 01S will import when there is not a DispatchDate or Branch. It will use the system's current date and the Main branch.

- Fixed an issue with a customer-specific 01S setting.
