# DRTrack 24.4 (November 2024)

Modified on: Tue, 3 Dec, 2024 at 4:28 PM

## Enhancements

- Reworked the DRTrack to Geotab partner integration. Changes include:
  - Lowered the amount of authentication calls from ORT.
  - Removed nonrequired permissions for Geotab service accounts.
  - Updated date fields sent to Geotab.
- Updated the annual ORT framework to properly align with Trimble security requirements.
- Updated the Route Exporter to only routes within the last 24 hours to eliminate unnecessary export loops.
- Eliminated duplicate requests by Trip exporter to Driver export to eliminate unnecessary export loops.

## Bug Fixes

- Fixed an issue where two DRTrack tasks were running multiple times after the scheduled times.
- Fixed an issue where exporting to Geotab from DRTrack was not displaying a failure message when export failed.
- Fixed an issue where some routes were not getting exported to a newly created Samsara driver.
