DRTrack 25.1 Release Notes (March 2025)

Modified on: Wed, 12 Mar, 2025 at 11:12 AM

DRTrack 25.1 is now available to all customers. If your DRTrack account is not set up for automatic updates, please **contact our support team** (https://support.appianrouting.com/en/support/tickets/new) to schedule a time for your update.

Enhancements

- Updated code to support a **Dispatch Groups** feature to be released later this year in Appian Resource Calendar.
- Added a unique identifier to exports from DRTrack to **Customer Communication Manager** to account for duplicate account numbers across branches. The identifier is added automatically in the background, and no action is required by users.
- Two new fields, **StopPlannedStartDate** and **StopPlannedEndDate,** can now be included in exports created by the **Route Export Service** tool.
- Optimized stored procedures to improve performance and performed routine code maintenance.

Bug Fixes

- Fixed an issue where the Route Audit displays the wrong **Module.** (Cloned Fixed routes were displayed as **ROUTE UPLOAD,** and are now corrected to display as **FIXED ROUTES.)**
- Fixed an issue where updates to the **Earliest Date** & **Latest Date** through the **Order Details** screen would not properly save.
- Fixed an issue where **Asset ID** on the manual login page was displayed incorrectly.
- Fixed an issue with the **Route Calendar** where an error was displayed if viewing unloaded stops in the map spanning more than one day.
- Updated the DRTrack footer with the proper phone number to contact support.
- Fixed an issue where compressed images sent to the **Resource Service** were being rotated.
