D²Link® App 3.4.16 Release Notes

These release notes contain this information:

- Warnings (read these if they are included)

- Requirements (what you must have before you install this release)

- Enhancements (new or updated features)

- Resolved issues (application improvements)

Note: Before you upgrade all of your fleet's apps, Trimble *strongly* recommends that you read the warnings and requirements. Then, install the latest version in a test environment.

If you have questions, contact [Trimble Transportation Support](#). If you do not already have an account, click **Sign Up** to create one.

Requirements

Install and set up the required hardware and software to use the D²Link app.

Hardware

Hardware	Recommended Version or Amount	Minimum Version or Amount
A smartphone, pad, or tablet with one of these operating systems:		
▪ Android™ OS **Note**: You must also have access to Google Play Services for Android devices.	10.0 or later	8.0
▪ iOS™	13.0 or later	12.0
RAM	512 MB or more	256 MB
Available storage space	250 MB or more	100 MB
A built-in flashlight		

Software

Software	Recommended Version	Minimum Version
D²Link host	19.12.04.20191204 or later	19.12.04.20191204
A core dispatch system that connects to the D²Link host. Examples:		
▪ TotalMail® software *and* one of these:	2018.4.9544	2018.4.9544
▪ TMWSuite® software	2020.4 or later	2020.4
▪ TMW.Suite™ Enterprise SystemsLink software (TMW® Operations *or* Fuel Dispatch)	2020.4 or later	2018.4
▪ TruckMate™ software	21.4 or later	20.4

Enhancements

Usability (UX) and user interface (UI) improvements

Added exceptions to when TMS deletes a schedule (TTESUITE-204767)

This applies only if the **Mutable Status** setting is *false* and a schedule changes. Now, TMS only deletes these schedules:

- A schedule that has not yet started.
- For a schedule in **Active** status, TMS only deletes stops that are not complete or in progress. Specifically, it does not delete stops with the status **Arrived** or **Completed**, but it does delete other stops in that schedule.

Easily manage or delete your account (TTESUITE-203722)

We added two links to the **About** page for your convenience. The links are **Manage My Trimble ID Account** and **Delete My Trimble ID Account**.

Improved message text (TTESUITE-204601)

Previously, message text said "Trip *XXX*", where "*XXX*" is the **Trip** or **Order** number related to the message. The message is now "Trip / Order *XXX*" to avoid confusion.

Improved the date field on forms (TTESUITE-204360)

Now your company can modify the date field on forms so that users can specify dates more than one year into the future.

Improved usability for one Schedule Restrictions setting (TTESUITE-203832)

The app now responds better if the **Schedule Restrictions** setting is *2: None* and the app receives a request to update or delete a stop. Now, a message indicates that there is a change. Either it explains an action you must take or it automatically takes you to the appropriate screen.

Notifications now close after a few seconds (TTESUITE-204600)

This applies only if the **Schedule Restrictions** setting is *2: None*. Now, notifications close after a few seconds. Drivers do not have to tap **OK** to close the notification.

The Missing paperwork page is now available offline (TTESUITE-21186)

You can view and use the **Missing paperwork** page if you are offline. This feature is available if you logged in while online, before you lost network connection.

View your pay even while offline (TTESUITE-203224)

If you are offline, the **Pay Summary** data now appears from when you were last online.

Resolved issues

App functionality issue

- **TTESUITE-204253**

    The app did not send the correct version number to the host computer with each message.

Usability (UX) issues

- **TTESUITE-202981**

    This affected customers with the **Mutable Status** set to false.

    If you updated the schedule in the **CURRENT** tab and a trip was in progress, then the trip incorrectly went back to the **PLANNED** tab.

- **TTESUITE-203747**

    When you selected one or more values in a form menu, sometimes the length of the values caused other items to move off screen. This made them unavailable.

- **TTESUITE-204236**

    Order summary cards displayed the destination data under **ORIGIN**. They should have displayed the origin data under **ORIGIN**.

- **TTESUITE-204331**

    This affected some Samsung users, especially Samsung tablet users. The app ran slowly and sent multiple arrival, departure, and log-on messages.

- **TTESUITE-204482**

    On the scan bar code screen, if you tapped the back icon, it went back two screens, not one. Any data that you entered in the form was lost.

- **TTESUITE-204598**

    This happened if you upgraded from the D²Link 1 app to the current D²Link 3 app.

    Before you depart from a stop, tap **Viewed** to see the items that you entered. Review the list before you sign the form to complete the stop.

    After the upgrade, the **Viewed** button did not work.

Trimble.

User interface (UI) issues

- **TTESUITE-201028**

  On some devices, when you attached a document or image to a form message, the icon did not appear correctly.

- **TTESUITE-204469**

  After a destination change was received, the onscreen text did not always update. To refresh the text, you had to leave the screen and then return.

- **TTESUITE-204599**

  There was a spelling error in the *Offline Mode* message.
