FleetConneX™ Back-End Applications 2024 Release Notes

Updated for Platform version 2024.6.6640.0 only. FleetConneX Portal did not change.

Note: These release notes apply to the back-end software application **FleetConneX Platform**.

These release notes contain some or all of this information for each release:

- Warnings (read these if they are included)
- Requirements (what you must have before you install this software release)
- Enhancements (new or updated features)
- Resolved issues (application improvements)

Note: Before you upgrade your production environment, Trimble *strongly* recommends that you read the warnings and requirements. Then, install the latest version in a test environment.

If you have questions, contact your Trimble customer representative.

2024.6

This release is for Platform version 2024.6.6640.0 only. FleetConneX Portal did not change.

Resolved issue

- **TTESUITE-206753 FCX Geotab Mileage Retrieval module**

The FCX ingest of Geotab meter reading data now does an additional grouping layer of device ID and diagnostic type. So FCX will generate a MileageReadingInformation payload for each unique combination of device ID and diagnostic type from a Geotab data retrieval. This will allow for units to provide multiple diagnostic updates from a single Geotab poll update.
