

DirectRoute 24.2 (June 2024)

DirectRoute 24.2 General Release is now available to all customers on [Client Center](#)

New Features

- Layover events in DirectRoute and TransportationModeler can now be manually moved to occur earlier in the route. Running **Optimize Between** or **Optimize Within** will overwrite any manual edits.
- Web-based PC*MILER Content Tools can now be connected to DirectRoute and TransportationModeler to utilize avoids and favors.
 - This is now available to customers who own a version of on-premises PC*MILER, PC*MILERWeb, or PCMWebServices. For more information on how to enable these services, please contact **Trimble Maps Support** (<https://support.appianrouting.com/en/support/tickets/new>).
- Added a link to **online documentation** (<https://support.appianrouting.com/en/support/home/>) in the Help menu (**Help> Documentation**).
- Added a link to **Content Tools** (<https://contenttools.alk.com/>) login in the Help menu (**Help> Content Tools**).

Bug Fixes

DirectRoute

- Fixed an issue where the Extract option to create a stop file from a .csv encountered an error related to a failed clipboard operation in Windows 11.
- Fixed an issue where Initializing routes with empty and unavailable trucks created a route to stop mismatch.
- Fixed an issue in Drawing Mode where the shape dimensions detail information below the map was obscured.
- Adjusted the Map border to prevent it from covering stops while using map shortcuts.
- Fixed an issue where **Optimize Within Routes** was not working with Exclusion Codes.
- Fixed an issue where Stop User Fields on consolidated orders were showing as zeros.
- Fixed an issue where the UPL export only showed the first order number on consolidated orders.
- Fixed an issue where the algorithm did not use the Average Speed setting in Preferences instead of DirectRoute Drive Time. This is incompatible with the **Minimum Time Between Stops** setting.

TerritoryPro

- Fixed an issue where modifying the symbol, size, or color was reverted after adding a new day for any Territory.

TransportationModeler

- Fixed an issue where the algorithm did not use the Average Speed setting in Preferences instead of DirectRoute Drive Time.

Updating to a New Version

If you are interested in updating to this newest release or any other version, contact **Trimble Maps Customer Support** (<https://support.appianrouting.com/en/support/tickets/new>), or call (US toll-free): phone **1-800-663-0626** (Option 2, then Option 8); Monday-Friday, 7am-5pm Central Time.
